- Flexible expansion possible
- Acquisition of new customers
- Central overview of utilization

Implementation Partner

SMS Business Software Solution GmbH
Kirchheim/Teck
www.sms-erp.de

APLIKO GmbH
Gelsenkirchen
www.apliko.de

Pakic GmbH has been working as an industry supplier since 1990 and produces consistently reliable quality at competitive prices. Customers include well-known companies, corporations and world market leaders who value flexibility, high vertical integration and absolute reliability.

In order to optimally control the smart factory, Pakic uses SAP Business One with the production solution SBO.PRD and the mobile application SBO.APP as well as the EDI and logistics solution APLIKO SCM. All production orders are made available digitally and order-related via the SBO.APP at every workstation and controlled in real time. The digital transformation has now definitely arrived at Pakic.

Belizer Pakic, Managing Partner about the application and the implementation project:

„We align the company strategy with our future concept. This provides for the expansion of digitization and automation throughout the company. We achieve this with the ERP system SAP Business One and the extensions of the companies SMS and APLIKO.“

As a medium-sized company, we are therefore able to react immediately to short-notice changes in call-offs or orders. We always have the necessary overview of the relevant information.

Our partners SMS and APLIKO support us with their many years of practical know-how. The implementation itself was therefore efficient.

Much more important, however, is the continuous support and further development of the systems. This also enables us to serve new requirements from our customers.

Pakic GmbH is therefore already successfully using concepts from digitization and Industry 4.0, while others are still talking about it.“
